

Business Requirements Document

1. Purpose of This Document

This document explains the business needs for developing a Grievance Management Application. It is intended for software vendors to clearly understand what the client expects from the system.

2. Business Objectives

The main goal of the application is to receive, track, manage, and resolve grievances in a structured and transparent manner. The system should improve communication, accountability, and response time.

3. Scope of the Application

The application will allow users to log in, submit grievances, track grievance status, manage users, and control system-level settings. Only approved users can access the system.

4. Users and Access Levels

The application will have different types of users such as system administrators, staff members, and end users. Each user will have access based on their role.

5. Login and Access

Users must log in using a username and password. If a user forgets the password, they can reset it using an email link or by answering their saved recovery questions.

6. User Management

Only the system administrator can create and manage users. Each user must have a valid email address and at least one role. Users may be internal or external.

7. Password Support

Users will be guided to create strong passwords. Passwords must be changed at regular intervals except for the system administrator.

8. Grievance Creation

End users can submit grievances by entering complainant details, project information, and grievance description. A unique reference number will be automatically assigned.

9. Grievance Tracking

Users can view the status of grievances they have raised. Open grievances are shown by default, with an option to view closed ones.

10. Notifications

When a new grievance is submitted, relevant staff members will receive a notification so they can begin reviewing it.

11. Reporting

The system should allow viewing grievance records based on status and basic details.

12. Out of Scope

Advanced analytics, integrations with other systems, and mobile applications are not included in the current phase.

13. Assumptions

All users will have internet access and a valid email address. The application will be used only by authorized users.

14. Acceptance Criteria

The solution will be accepted when all described business needs are met and stakeholders confirm usability.

Key Grievance Information

Field	Business Meaning	Mandatory
Complainer Name	Name of person submitting the grievance	No
Organization Name	Organization related to grievance	No
Contact Number	Phone number for follow-up	Yes
Email Address	Email for communication	Yes
Grievance Description	Details of the issue raised	Yes
Project Name	Related project name	Yes
Project ID	Project reference number	Yes
